

Policy

Procurement Policy

Our commitment

The Beerburrum to Nambour Rail Upgrade Project (B2N) is committed to efficient, effective, ethical and sustainable procurement.

Our approach

B2N will strive to maximise value for the project, clients and the communities we work in through best in class ethical and sustainable procurement practices.

Procurement in practice

Without suppliers B2N cannot meet company, client or community expectations. The way we procure and manage the supply chain has a significant influence on profitability, reputation, stakeholders, communities and our success in meeting our sustainability objectives and expectations.

B2N will and expects all our employees, contractors and business partners to:

- Uphold ethical business practices while complying with legislation, regulations, standards, codes, licences and comply with applicable codes of business conduct, policies and procedures including those of B2N.
- Understand the risks and complexities of the services and products we procure so that we can recognise and respond to issues appropriately to minimise risks.
- Develop, promote and maintain systematic, integrated and competitive selection, approval, and review processes to manage all critical and strategic suppliers.
- Continuously improve supplier relationships and develop a resilient supply chain.
- Ensure all procurement decisions are aligned with the business strategy and take into consideration whole-of-life cost and the triple bottom line being the economic, environmental and social impacts.
- Recognise, evaluate and implement measures to minimise to the greatest extent possible the risks associated with modern slavery within our operations and supply chain.
