Sustainability Policy

Our commitment

The Beerburrum to Nambour Rail Upgrade Project (B2N) is committed to integrating economic growth, environmental resilience and social progress as priorities into decision making at every level, with the ambition to create long term value.

Our approach

B2N will work in a manner that maximises positive environmental, social and economic impacts for our people and stakeholders. We are adopting a resilient and enduring approach to meet and mitigate the existing and emerging challenges for society and our infrastructure environment. B2N acknowledges that sustainability enables long-term economic resilience.

Sustainability in practice

- Create a sense of place for communities, by making a positive and meaningful difference to the community by genuinely engaging with the community and stakeholders.
- Work closely with our customers to achieve optimal and resilient outcomes for users and society.
- Decision making will integrate economic, social and environmental and governance aspects and seek to achieve positive outcomes in each.
- Minimise whole of life asset impact by future proofing assets and responding to climate change.
- Address environment considerations in a manner that is sensitive to the needs of our stakeholders, the environment and heritage values, creating enhanced environmental outcomes wherever practical.
- Be recognised as an industry leader in making our workplaces safer through innovation, collaboration and effective planning and management of risks.
- Adopt the circular economy philosophy in relation to materials, water and waste and implementing a circular economy initiative on the project.
- Enhance workforce health and wellbeing inclusion and diversity, through employee empowerment to deliver sustainable outcomes.
- Source sustainably and ethically including prioritising local industry participation, social procurement initiatives and a commitment to avoiding modern slavery.
- Encourage innovation on the project and within the supply chain to achieve sustainable outcomes.
- Manage all activities ethically, measuring and reporting sustainability performance of the project to drive continual improvement.
- Govern for sustainability by implementing project systems and processes to ensure the effective and efficient delivery and operation of the project.
- Support the UN Sustainable Development Goals.
