Out of Hours Work: Verification monitoring took place on 47 individual occasions at the following locations: EP02, EP03, EP04, EP05, ECRL1, ECRL4, ECRL5, ECRL6, ECRL10, ECRL11.

NRT construction noise was found to be within the specified noise limit at all locations during this monitoring period. It was noted that extraneous noise (traffic) was the dominate noise source where the Leq exceeded the target dB level. Mitigation measures were implemented and alternate accommodation was offered to affected residents where the target dB was 65dB or greater during NRT construction work.

NRT construction noise at EP02 was inaudible on all five (5) individual occasions. Extraneous noise was present during the monitoring period predominately consisting of traffic 65/70dB and passing passenger/ freight trains 73 - 82dB.

NRT construction noise at EP03 was inaudible on all five (5) individual occasions. Extraneous noise was the dominate noise source during the monitoring period, predominately consisting of traffic passing by on nearby roads 65/75dB.

NRT construction noise at EP04 was inaudible on all five (5) individual occasions. Extraneous noise was audible during the monitoring period, predominately consisting of traffic passing by on nearby roads 40/68dB as well as trains 52 - 60dB.

NRT construction noise at EP05 was inaudible on all three (3) individual occasions. Extraneous noise (traffic) was the dominate noise source 60 - 77dB.

NRT construction noise at ECRL1 was audible on two (2) occasion and inaudible on four (4) occasions. Construction noise consisted of: reversing quackers 45db, hum of machines 42 / 45dB, drilling intermittently 50/57dB, jackhammer intermittently 59/61dB. Extraneous noise was the dominate noise source during the monitoring period, consisting of: birds chirping 55 / 60dB, traffic from pacific highway 57/60dB.

NRT construction noise at ECRL4 was audible on three (3) occasion and inaudible on two (2) occasions. Construction noise consisted of: reversing quackers 47/53dB, banging intermittently 47dB, hand tools 65dB. Extraneous noise was the dominate noise source during the monitoring period, consisting of: traffic 54/57dB, birds chirping 72dB.

NRT construction noise at ECRL5 was audible on all five (5) occasions. Construction noise consisted of: reversing quackers and machinery operating 48 / 55dB, hand tools 52 /55dB, mobile crane lifting load 54dB. Extraneous noise audible - traffic passing on nearby road 50/60dB, birds calling 48/55dB.

NRT construction noise at ECRL6 was audible on one (1) occasion and inaudible on three (3) occasions. Construction noise consisted of excavator operating 55 /60dB. Extraneous noise was the dominate noise source (traffic) 45 /65dB.

NRT construction noise at ECRL10 was audible on three (3) occasions and inaudible on (1) occasions. Construction noise consisted of: plant idle 54/58dB, reversing quacker 55dB. Extraneous noise was the dominate noise source (traffic) 65 /75dB.

NRT construction noise at ECRL11 was inaudible on all five (5) individual occasions. Extraneous noise was the dominate noise source (traffic) 55/95dB.

Monitoring location	Number of times monitored during the month	Attended or continuous monitoring	Event based monitoring (Y/N)	Parameter eg. Laq (15min)	min value dB (A) for month	max value dB (A) for month	goals / targets dB(A)
SG03	1	Attended	Yes	Leq	66.4	66.4	75
SG02 OOH	2	Attended	Yes	Leq	46.4	64.5	60
SH03	1	Attended	Yes	Leq	65.1	65.1	56

**Comments**

Standard Hours: Periodic monitoring took place on one (1) individual occasion at the following location: SG03. The Leq was found to be within the specified noise limit during this monitoring period. It was noted that extraneous noise (traffic) was the dominate noise source 60 / 77dB . NRT construction noise was audible at SG03. Construction noise consisted general works 56dB, trailer from a truck closing 72dB.

Out of Hours Work: Verification monitoring took place on 3 individual occasions at the following locations: SG02, SG03  
 NRT construction noise was found to be within the specified noise limit at all locations during this monitoring period. It was noted that extraneous noise (traffic) was the dominate noise source where the Leq exceeded the target dB level. Mitigation measures were implemented and alternate accommodation was offered to affected residents where the target dB was 65dB during NRT construction work. NRT construction noise was inaudible at the following location: SG03.  
 NRT construction noise was audible at SG02. Construction noise consisted of the hum of a saw operating intermittently 49/50db, reversing quacker 43dB. Extraneous noise (traffic) was the dominate noise source at this location. Traffic along Showground Rd was constant 68/78 dB.
